

The small, powerful Linear Boost has been designed to achieve consistent and transparent signal amplification.

The gain level is controllable, and can be anywhere between 0 dB and 23 dB, making this an all-purpose pedal, the ideal choice whether you are looking to saturate your amplifiers, give a "boost" to your solo parts, or to use it as a buffer in the 0 dB position. Its very small dimensions mean it can fit in even the smallest spaces.

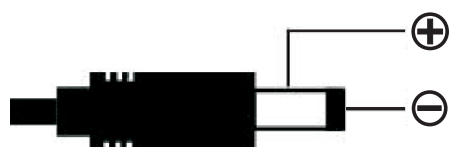

How to use

Notes:

The pedal is not equipped with internal battery, it must be powered by a external power supply.

External power supply

9 -18 V DC / 20mA
